Compostable materials

Our product range includes various solutions of plant-based materials or biodegradable polymers.
Our compostable materials offer excellent performance and they are ideal for different applications like bags with cursor, adhesive tape band, and packaging with compostable grip seal.

Available OK COMPOST Industrial certification

UNI EN 13432 regulation

All our compostable materials comply with UNI EN 13432 regulation, which establishes European requirements for compostable packaging. It states that a material can be defined 'compostable', if it meets the following criteria:

- Within 3 months at least 90% of the material's mass must break down in fragments, which are smaller than 2 mm.
- The material must not contain SVHC substances listed in Annex XIV of REACH regulation.

Once it is put into an industrial composting plant, the material decomposes within few weeks thanks to microorganisms and enzymes that allow the degradation process.
